## THIS IS SOMETHING DIFFERENT

One of the fast growing technologies for cosmetic procedures, Leverage Laser System. It is reshaping the patients and the practice.

Utilizing laser technology in a globally trending non-surgical aesthetic procedure, Leverage leverages advanced laser technology to target fat reduction and stimulate collagen production in both facial and body treatments.

The innovative Endo-Lifting technique effectively reduces the signs of aging, offering skin tightening and lifting effects, with proven results and unmatched versatility.

INDUSTRY-LEADING  
**5-YEAR**  
WARRANTY

### SURGICAL RESULTS WITH MINIMALLY -INVASIVE PROCEDURES

- In office one treatment procedure.
- Ideal for patients who prefer non-surgical alternatives.
- Dramatic results with faster recovery.

### SIMPLE TO SET UP

- Allowing you to focus on the patient and procedure.
- Smart software with presets and intuitive interface.

### COMPACT, YET POWERFUL

- Automatic WIFI updates
- High-end aluminum body.
- Easy for mobilization.

### THE EVOLUTION

The move from laser liposuction to non-surgical endo laser signifies a major cosmetic advancement. Leverage laser sets the industry standard for safety and efficacy, used without traditional liposuction, employing only fiber optics. This minimally invasive approach effectively contours subcutaneous tissue and enhances skin laxity.

### HOW IT WORKS

The Endo-Lifting procedure utilizes a fiber laser, which is easily inserted into the subcutaneous tissue, creating micro tunnels along specific vectors. This laser effect promotes neocollagenesis, leading to skin tightening, while also targeting subcutaneous fat for reduction.
